# LIBRARY USER GROUPS

NEOMIN is looking for school district volunteers to share information during monthly Library User Group meetings. You will be allotted up to 30 minutes and may choose any topic that you'd like to share with the group. Possible topic suggestions include...

Tools
Themes Lessons
Instruction Statistics Research
Projects Training
Computers Surveys
Technology Professional Development Tips
Apps Widgets
Guides Advocacy Organization Reports
Literacy Automation Blogs
Websites Resources
Books INFOhio

Thank you for volunteering!

ShareBookBox.com embeddable book widget

Librarian Favorites
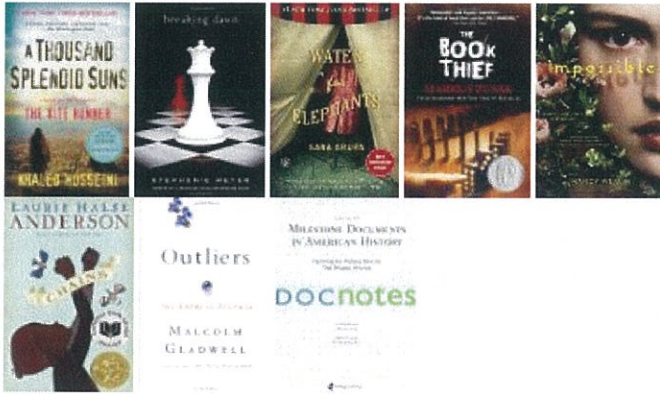

get your own **BookBox**

What is BookBox?

BookBox(beta) is a tool for quickly embedding images of books into a web page. You can use it to show your favorite books to readers of your blog or website. If you mention a book in a blog post, you can include an image of the book cover to make it easier for readers to find out more about it. Educators use BookBox to recommend books to students and parents. Libraries and bookstores use BookBox to show books recently added to their collection or featured books.

ShareBookBox.com embeddable book widget

Fast, simple, free, no registration or email address needed.

▼ show help | faq | news

Add new book: author / title / ISBN   Search
Partial or inexact data is ok

BookBox title: Favorite books:
Text appearing above widget.

Nr. of books: 8
Randomly picked from your list every time.

Amazon-id: .com ▼ what's this?
(optional)

Update existing BookBox
Password: Save and update

Create new BookBox
Password: Save and embed

After you save your BookBox, a script will appear here that you can copy & paste

How to add/remove books?

Just use the search text box after "Add new book". It should be sufficient to enter part of the title or author's name or the ISBN number, as the page relies Amazon's book search functionality. Currently there is a limit of 20 books within a list. Out of these, BookBox will show a random selection of books every time the page is reloaded. In some cases no cover image is available from Amazon. Often a different edition of the book will have the cover image. To remove books from a collection, just click the Remove button below a book image.

www.sharebookbox.com

How can I update my BookBox?

Immediately after creating the BookBox you can continue adding and removing books and when you are done you can save it with the **Save and update** button, after entering your password again. If you have created a BookBox earlier and embedded it on a page, click the link "get your own BookBox" below it and you get to the page where you can edit and update it. If you have arrived at the BookBox page directly (not following an existing BookBox) you can start creating a new one from scratch.

Can I create more than one BookBox?

Yes. After you save a new BookBox, the "Save and embed" button will be disabled. This is just to avoid confusion about whether further clicking the button would overwrite the existing or create a new BookBox. After you create a new BookBox, you can update it with the "Save and update" button. If you want to create a new BookBox, you need to reload the page or click again the "get your own BookBox" link below the widget.

How to embed BookBox in my webpage or blog?

You can copy the script that BookBox returns and paste it into the HTML source of your webpage. To embed it within a single blog post, edit the HTML source of that post.

Why just password and not user name is needed?

To make things simpler. Each BookBox is still uniquely identified by a number (the one you can see in the script copied into the page source and also in the address bar in the browser). After embedding the BookBox it is not necessary to remember this number: clicking the "Get your own bookbox" link under the embedded widget takes you to the right page.

I forget my password, what to do?

As there is no registration and no email address asked, I can't reset and send out passwords in email. You can still modify your list of books and then save it as a new BookBox, with the **Save and embed** button (with a new password). Then replace the script in your webpage with the new script that is generated.

Can I create a BookBox widget without linking each cover to amazon? Yes.

Edit the code. If you leave the code as it is, each cover becomes a link to its amazon page. You can delete the links with a simple fix. Instead of "widget2" in the code you're going to change the 2 to a 3. The code is very short and the bit that gets edited looks like this:
src="http://www.sharebookbox.com/**widget3**.php?id=2282
